Neurodiagnostics

## Critical risk nonconformance

### Introduction

Under established Diagnostic Accreditation Program (DAP) policy, identified nonconformances represent a risk that must be managed within an appropriate time frame. Through the use of a risk/frequency matrix the DAP has established time frames within which resolution to identified nonconformances must be submitted.

Critical risk has been defined as a nonconformance that results in an immediate hazardous or unsafe condition for patients or facility personnel, or a pervasive deficiency in the facility that represents systemic failure leading to unsafe conditions for patients or facility personnel. Critical risk nonconformances require immediate corrective action.

Through consultation with subject matter experts and community feedback, the DAP has identified a number of standard criterion that have been determined to be critical risk.

When a critical risk nonconformance is suspected to represent an immediate hazardous or unsafe condition for patients or facility personnel during an assessment activity the critical risk nonconformance management process will be initiated.
